

ENVIRONMENTAL COMPLIANCE NAPLES, FLORIDA

Client

St. Agnes Catholic Church

Location

Naples, Florida

Project value

\$12,000+

In 2009, St. Agnes Catholic Church selected Collier Environmental Services for the eradication of exotic vegetation in Naples, Florida. A post-permit compliance inspection revealed no evidence of any exotic vegetation maintenance. The South Florida Water Management District permit requires perpetual maintenance to their preserve areas. The contract objectives were to perform those actions necessary to immediately bring their preserve areas back in compliance with their South Florida Water Management District permit.

The scope of work included the eradication of exotic and nuisance plants (as currently defined by the Florida Exotic Pest Plant Council) on approximately 20 acres of preserve area. Exotic and nuisance species were eradicated through removal and targeted herbicide applications. Exotic vegetation was widespread and highly prevalent in both preserve areas. The site was inspected by an independent biologist to verify eradication followed by a SFWMD site visit to establish compliance with their permit. A monitoring schedule has been reactivated
